

Objective

We have a dataset of Amazon sales Reports. Where We have only two tables:

1. Customers
2. Orders

After that I have merged these files on the basis of customer Id column and Order Id column.

After analysis, we can see the meaning Insight Generated from dashboard and Also a Insightful storytelling dashboard. This Dashboard id going to Help the organisation to take Decision and make strategy for future Growths.

Insights:

What KPIs tell us?

1. It shows the total revenue generate between march to April is 78.6M In financial year 2020.
2. Also, the estimate profit made between These month is 23.6M
3. Total order placed 1 lac 29 thousand approx.
4. And the total quantity sold 116.6 K.

What The Bar Charts tell us?

1. The highest revenue generates from Sets, kurta and Western Dress, the made 39.2M, 21.3M, 11.2M Respectively.
2. The Lowest revenue generates from Dupatta, Saree and Bottom, the made 0.01M, 0.1M and 0.2M respectively.

2. According to merchant's Amazon Generate Highest Revenue it approx. 54.3M.

3. Total 5935 order cancelled out of 129000 orders it approx. 4.6% cancellation Rate.

What month trends tell us?

1. It shows April have highest and March have Lowest revenue contribution.

What pie chart tell us?

2. It shows 84.89% of the Order been Shipped and 90% Have Been Successfully Delivered.

What is the conclusion.

- We can see most of the order cancelled due to inventory failure so we should keep focus on the inventory Department.
- Also, we have also followed – UP with Warehouse management system of all the state location.
- Need more accuracy in delivery time and give 24*7 customer support for smooth delivery process.
- Keep focusing on the prices and discount of blouse, bottom, sarees and dupatta so, need follow-up with retailers.
- We will keep more focus on Lucknow, Gurugram, Kolkata and Thane because their revenue was not satisfied.
